GİRİŞ | INTRODUCTION

Yağ soğutma eşanjörleri ısı transfer sıvıları, yağlama yağları ve soğutma yağları için uygundur. Yüksek kaliteli bu ürünler en iyi malzemenin (hammaddenin) ve en yeni üretim tekniklerinin birleşimiyle üretilmektedir.

Standart üretimde tatlı su soğutmalı ve deniz suyu soğutmalı 4 farklı ürün grubu bulunmaktadır. Yüksek verim, kolay temizlik, dayanıklılık ve ekonomik olarak ürünlerini sınıflandırmak mümkündür.

Oil cooling exchangers are ideal for heat transfer fluids, lubricating oils. These high-quality products are manufactured by latest production techniques using the best raw materials.

Standart manufacturing range involves 4 fresh-water-cooled and sea-water-cooled product groups. The products are marked by high efficiency, ease of cleaning, durability and low cost.

DİZAYN ŞARTLARI VE TASARIM | DESIGN SPECIFICATIONS

REFKAR eşanjörlerinde tatlı su uygulamalarında ısı transfer borusu bakır, gövde borusu ve ayna sacları karbon çeliği, kapaklar GGG döküm, contalar asbestosiz klingerit olarak uygulanır.

Deniz suyu soğutmalı ürünlerde ise CuNiFe %10 ısı transfer boruları ve DDI316L ayna sacları belirleyici özelliklerdir. Deniz suyunda kapaklarda ayrıca Zn anot kullanılır.

Tasarım Unilab, HTRI, Siemens NX, mekanik TS EN134453 uygulamaları ile yapılır. Standart yağ eşanjörleri maksimum 12 bar çalışma basıncına göre dizayn edilmiştir ve 18 bar azot ile test edilir. 120 °C'ye kadar rahatlıkla çalışabilir.

Fresh water implementations of REFKAR exchangers include copper heat transfer tubes, carbon steel body tubes and shims, GGG-cast covers and klingerite non-asbestos gaskets.

In sea-water-cooled products, distinctive features are CuNiFe 10% heat transfer tubes and DDI316L shims. Zn anode is used for covers of sea-water-cooled products.

Unilab, HTRI, Siemens NX and mechanical TS EN134453 applications are used for design. Standard oil exchangers are manufactured for maximum 12 bar operating pressure and tested with 18 bar nitrogen. They are well-equipped for operation at 120 °C.

SEÇİM | SELECTION

Katalog içerisinde bulunan seçim tabloları, grafikler ve düzeltme faktörleri, hesaplama kılavuzunda belirtilen şekilde kullanılarak ihtiyaç olunan ürün kolaylıkla hesaplanabilir. Seçim yapılırken aşağıda belirtilen verilere ihtiyaç vardır.

Soğutulacak yağın cinsi

Yağ debisi

Giriş yağı sıcaklığı

Atılması istenen ısı miktarı

Soğutucu akışkan giriş sıcaklığı

cSt at °C

Regarding to above explanation;

$$Q = 22 \text{ (kW)} \times 0,81 \text{ (K Factor)} \times 1 \text{ (F Factor)}$$

Graph

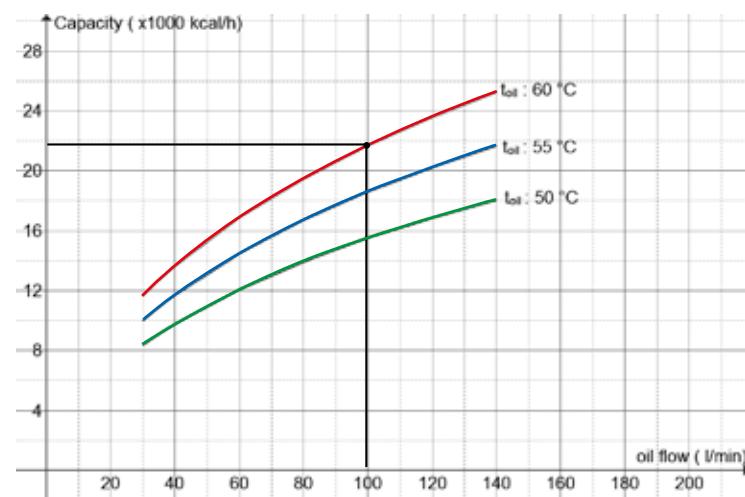

Table

Oil Grade

Q = 17,82 kW capacity confirm our choise RYG 90/1060-4P model.

Tabloda verilen değerlerde su giriş sıcaklığı t_{win} : 20 °C, yağ viskozitesi 32 cSt olarak kabul edilmiştir.

Note: The graphs above are prepared according to water inlet temperature t_{win} : 20 °C and oil viscosity 32 cSt values.

Sıcaklık Değerlerine Göre Düzeltme Faktörü (K) - Temperature Correction Factor (K)

t_{oil}/t_{water}	40,00	35,00	30,00	28,00	25,00	20,00	15,00	10,00
60,00	0,52	0,64	0,76	0,81	0,88	1,00	1,10	1,20
55,00	0,45	0,59	0,73	0,87	0,92	1,00	1,12	1,24
50,00	0,34	0,51	0,68	0,84	0,90	1,00	1,14	1,28

Yağ Cinsine Göre Düzeltme Faktörü (F) / Oil Grade Correction Factor (F)

CST	10	15	20	32	40	50	60	80	100	200	300
F	0,50	0,65	0,77	1,00	1,20	1,40	1,60	1,90	2,10	3,30	4,30

KURULUM | INSTALLATION

Yağ eşanjörleri, soğutma suyunun tam verimde çalışabileceği şekilde ters akışta ve aşağıda belirtilen montaj şemasına uygun olarak kurulmalıdır. Eğer su akış kontrol valfi kullanılsaksa su valf kesintile su giriş tarafına uygulanmalıdır. Soğutma suyunun pH değerinin 7,2 - 7,8 arasında olmasına dikkat edilmelidir.

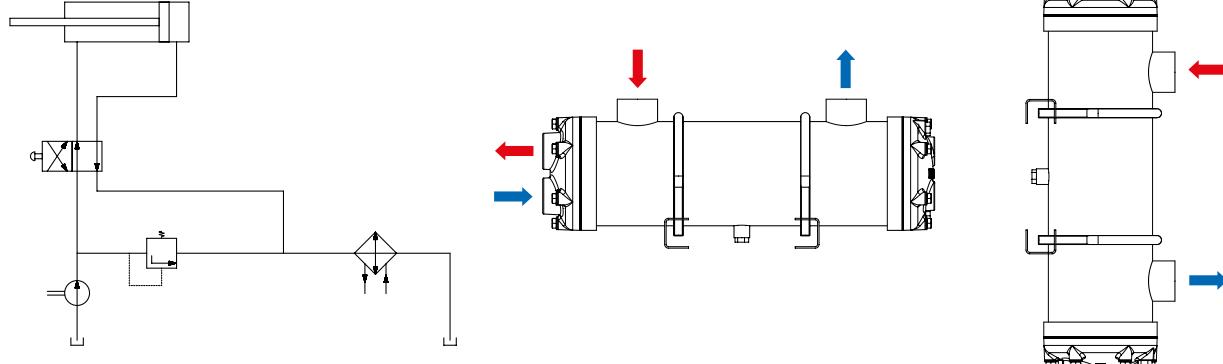

Yağ soğutma eşanjörleri, hidrolik sistemlerde, dönüş borusu ile yağ tankı arasındaki düşük basınçlı alanda uygulanmalıdır. Eğer sistemde böyle bir hat yoksa yağ tankı ile yağ eşanjörü düşük basınçlı ikinci bir pompa ile birbirine bağlanmalı ve soğutma bu şekilde gerçekleştirilmelidir.

Her ihtimale karşı yağ basıncının, soğutma suyu basıncından yüksek olması önerilir. Olası bir kaçak durumunda yağ suya doğru sızar ve hidrolik yağınnen zarar görmesi kısmen engellenebilir. Hidrolik sistemine ve yağına su karışmamış olur.

Oil heat exchangers should be installed opposite to the flow where they can operate with maximum efficiency and according to the installaGon schemaGc given below. If a water flow control valve is to be used, this valve must always be used on the water entry side. Care should be taken to keep the coolant water pH value between 7,2 and 7,8. In addiGon, some water values according to the table below should be used for the coolant water.

Oil cooling heat exchangers must be used in hydraulic systems, in the low pressure area between the return pipe and the oil tank. If there is no such line in the system, the oil tank and the oil heat exchanger must be connected to each other with a second pump and cooling must be performed this way.

To be on the safe side, it is recommended to have a higher oil pressure than the coolant water pressure. In case of a possible leak, oil will leak into the water and you may be parGally able to prevent damage to the hydraulic oil. Therefore no water will mix with the hydraulic system and oil.

KULLANIM VE BAKIM | OPERATION AND MAINTENANCE

Hiçbir eşanjör üreticisi kullanım şartlarından dolayı ürünlerine tam bir ömrü garanti edemez. Bununla birlikte ürünlerimizden en iyi verimi ve en uzun ömrü alabilmeniz için bazı önerilerde bulunabiliriz.

- Su devresinin kireçlenmeye ve kirlenmelere karşı uygun kimyasallar ile düzenli olarak temizlenmesi.
- Yağ devresindeki basıncın su devresindeki basıncından yüksek tutulması.
- Sistem kullanılmadığında yağ eşanjöründeki suyun boşaltılması.
- Yağ devresinde oluşabilecek kirlilikler ve birikimlerin perklorid ile ters akış sağlanarak temizlenmesi.
- Ürünlerin izin verilen limitler dahilinde kullanılması.

No heat exchanger manufacturer can guarantee a precise lifetime for their products due to operating conditions. However, we can provide some recommendations for you to obtain the best efficiency and longest service life from our products.

- Cleaning the water circuit regularly with chemicals against calcification and contamination.
- Keeping the pressure in the oil circuit higher than the pressure in the water circuit.
- Draining the water inside the oil heat exchanger when the system is not in use.
- Cleaning any contamination and deposits in the oil circuit via perchlorate in the opposite flow direction.
- Using the products within allowed specifications.

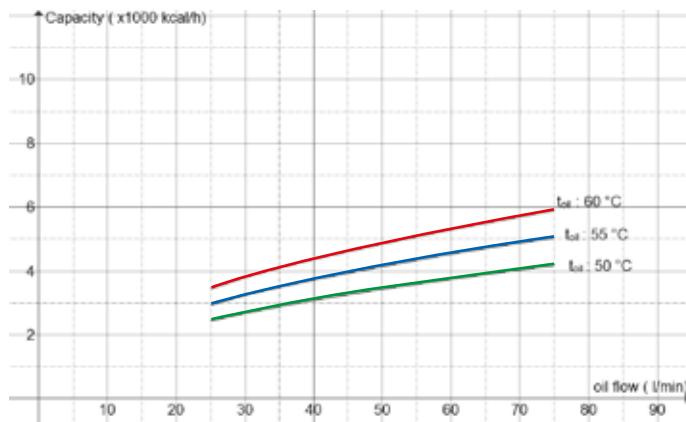

MÜŞTERİ ODAKLI ÇÖZÜMLER | CUSTOMER-FOCUSED SOLUTIONS

Tüm bu standart seri ürünlerin haricinde, müşterilerimizin ihtiyaçlarına yönelik, farklı basınçlarda ve değişik sıcaklıklarda çeşitli ısı eşanjörleri üretebilmektedir. Bu gibi özel ihtiyaçlarınız için firmamız size özel çözümler üretmekten onur ve mutluluk duyacaktır.

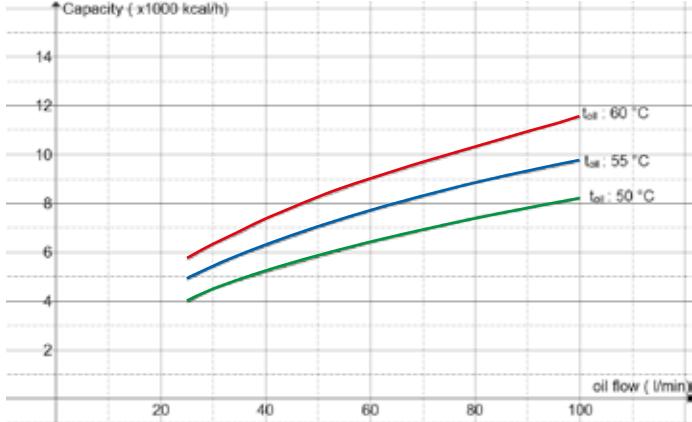

In addition to all these standard series of products, we can manufacture various types of heat exchangers with different pressure and temperature values to address the needs of our customers. Our company will be proud and happy to produce custom solutions for you if you have such needs.
